Min Order qty
Available for shipping from August 2011. Samples available now as required.

- A versatile set designed for re-chucking of bowls to remove chuck marks, add decoration or to re-shape the bottoms of bowls that have already been turned.
 - Standard Cole Jaws are suitable for lathes with minimum 12"/300mm swing diameter.
- Key Features of All NOVATMChuck Accessories:
- System compatibility - Jaw fixing profile is compatible across all NOVA Chucks and accessories.
 - Special Wood Turning Dovetail Profile - especially designed by Wood Turners so that the jaws will cut into the wood, grip firmly in the contraction mode and provide high tear out strength.
 - 2-Year Warranty
 - While traditionally these type of jaws are used in the compression mode - depending on the bowl shape, the jaws can be used to grip in either the contracting or expanding mode.
 - To ensure best grip, the bowl should have a positive or negative flair towards the edge of the bowl.
 - Try and avoid straight sided bowls where the grip will be less efficient. Best cutting technique is to have a cutting action with the chisel such that much of the force is directed towards the headstock, not across the face.
