How to fix clicking noise and "Low Voltage" message on Galaxi DVR 1644 lathe

Date Raised	customers (if applicable) R	ys be employed to ensure the Health and Safety of yourself, employees and efer to product manuals, exploded drawings and our website if further ontact us on service@teknatool.com		
Date Amended				
There are 2 solutions which can be tried to solve this problem. Proceed with solution1 first and progress onto				
solution2 if the problem does not resolve.				
Solution1: Perform Factory Reset to restore all default parameter values				
The steps on how to perform factory reset can be found on the FAQ article: <u>How to enter service mode on Galaxi</u> DVR 1644 lathe.				
<u>DVI(10111)</u>				
If the issue	still exists after performing factory reset, pro	gress to solution 2.		
Solution2: Adjust one parameter value in the software				
Step No.	Description	Image		
1.	Enter service mode on the lathe.	NO IMAGE		
	Follow article: <u>How to enter service mode</u>	NO INIAGE		
	on Galaxi DVR 1644 lathe.			
2.	Press <menu></menu> and select "Motor			
∠.	Parameters". Navigate down to the list of	F1 F2 F3 F4		
	parameters using the dial to locate the			
	parameter "UVTsdStp=345" on page7	ON Under Holtage OFF		
	Note:	UVtSdStP = 345V 1 1 1 1 1 1 1		
	On page2 there is a parameter "Vd DC			
	Bus " this parameter should be fluctuating	Menu F/R		
	between 340 and 359 when the lathe is			
	functioning correctly.	F1 F2 F3 F4		
		- Voltage Control -		
		• V KProp = 2000 ★ OFF		
		Vd DC Bus = 3550		
		Menu F/R		
	Press the dial in to select the parameter			
3.	and turn the dial to change its value.	F1 F2 F3 F4		
	Change the parameter value from 345 to	UnderV in Stop		
	340 or 355 by turning the dial. Press	ON Edit: 340 OFF		
	< F/R> to save the change.	Menu:Esc F/R:Save		
		Helideren Ivividade		

Menu

4.	Turn the lathe off and let it discharge for about a minute.	NO IMAGE
	Turn the lathe back on to check if the issue has been resolved.	
	<u>Note:</u> The ticking noise may still exist after these steps but it will not affect the performance of the lathe.	
	The circuit board will have to be replaced for a permanent solution to the ticking noise. Contact our support service to arrange a replacement.	

If neither solution listed above solves the issue completely, there is a problem with the board. To replace the board contact us through our support service at: <u>http://www.teknatool.com/support/</u>
